| 5. Description               | 5.1                                                                                                                            | FULMINE PIASTRINE BG0 is very effective because it protects you from common mosquitoes (Culex Pipiens), tiger mosquitoes (Aedes albopictus) and mosquitoes aedes aegypti confirmed vectors of Zika virus, yellow fever and dengue, currently not present in Italy.Its effectiveness is guaranteed in rooms of normal size (30m3), for about 8 hours with doors and windows closed. For larger rooms use more electroemanators.                                                                  |                             |
| 6. Mode of use               | 6.1                                                                                                                            | Insert a mosquito plate into the electroemanator. At the end of the period of use, disconnect the appliance from the socket. The replacement of the exhausted plate must take place with the electroemanator disconnected from the socket. The replacement of the exhausted plate must be done with the electric emitter disconnected from the socket or with the switch off. A mosquito plate lasts about 8 hours. At the end the plate will have lost its color and will need to be replaced. |                             |
