5. Carachteristics	ICAROF LOTION is a mite-repellent insect lotion ready for use immediately effective. ICAROF LOTION has an odorless and dermatologically tested formulation. It protects the skin without greasing it from mosquito bites of various species, including the Tiger mosquito (Aedes albopictus) and the Common mosquito (Culex spp.), both during the day and at night, for about six hours after treatment. ICAROF LOTION is particularly suitable for use in rural environments infested with ticks (Ixodes ricinus) allowing a prolonged protection up to seven hours after application. Very useful in MTV areas to control the spread of Vector Borne Diseases: efficacy against tropical mosquito (Anopheles gambiae) for more than two hours after treatment. For the safety of children it contains DENATONIUM BENZOATE, a very bitter substance that helps prevent accidental ingestion of the product.	
6. Usage mode	The applicator allows a right and easy dosing of the lotion. Shake before use and treat from a distance of about 10/15 cm and spread evenly on the skin to be protected. For applications on the face, neck and skin of children from 3 to 12 years, dispense a little 'product on the palm of the hand and smear avoiding the eyes and mouth. Do not repeat the treatment more than twice a day. Applications should be spaced out over time.
