| <b>6. Description</b>               | FULMINE SPIRALI BG0 are effective against the common mosquito (Culex pipiens), the tiger mosquito (Aedes albopictus) and other tropical mosquitoes, potential vectors of the zika virus, yellow fever and dengue, currently not present in Italy. Each spiral acts immediately after ignition and does not go out with the breeze.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |         |                             |
| <b>7. Mode of use</b>               | 1) Detach one from the other the two spirals, taking with the thumb and index finger of the two hands the nuclei of the two spirals and separate them with gentle movement as indicated in the figure, PAYING ATTENTION NOT TO FORCE NOT TO BREAK them.<br>2) Fold up the metal holder tab.<br>3) Insert the spiral on the tip of the tongue, taking advantage of the cut made in the center of the spiral.<br>4) Turn on the end of the spiral. After a few moments make sure that the flame has gone out leaving a small smoke.<br>5) Use the fragments, due to possible fractures of the spiral, inserting them in the appropriate slit of the support and lighting them.<br>6)The smoke of the spiral will continue to emit for about 6 hours protecting a space of about 10 m3.<br>7)LIGHTNING SPIRALS BG0 must be used exclusively outdoors: on the terrace, on the veranda, in the garden, in camping, in boat, during the picnic, etc.. |         |                             |
